Re: Southern Maryland Wood Treating Site
Monitoring Well Information Package

Dear Mr. Riedel:

In two previous letters, I forwarded information on the four deep monitoring wells, MW-19 through MW-22, located at the Southern Maryland Wood Treating site. Not included in those letters were data collected during the Focused Feasibility Study (FFS) and found in the Analytical Report (Roy F. Weston, August 20, 1993), an appendix to the FFS Report.

During a meeting held on March 17, 1994 to discuss the FFS Report, questions were raised regarding wet weight versus dry weight reporting of data and regarding hand-written notes in the draft data found in Section IV of that document. Enclosed is a memorandum from Harry Allen of the Environmental Response Team that responds to those questions and includes the data collected during the FFS for deep well MW-22. The memorandum confirms that, through the process of formal data review, the compounds in question are considered not detected in the ground water.

Upon receipt of this letter you should now have all of the available information gathered on the four deep wells to date. If you should have any further questions, please contact me at (215) 597-3167 or Lesley Brunker at (215) 597-0985.

Sincerely,

Stephanie Dehnhard
Remedial Project Manager
